

# **Pulmosure. Facilitates breathing in calves**

**Farm-O-San Pulmosure**

# Maintaining good respiratory health is of the utmost importance to ensure a calf reaches its potential

## Bovine respiratory health

The respiratory system of beef and dairy calves is very vulnerable:

- Lungs finish developing relatively late in life; only when the calf is 2 years old are the lungs fully mature. As a result, they have very little reserve capacity.
- Calf airways are relatively narrow.

## How does Pulmosure benefit calves?

Farm-O-San Pulmosure is a complementary feed for calves, containing an essential oil that supports breathing and clearing of the airways. Farm-O-San Pulmosure also contains a natural form of vitamin E and organically bound selenium.

## The function of eucalyptus oil

The use of eucalyptus oil in animal production has proven to be valuable. In a study by Soltan (2009) several beneficial effects on animal health and production related to eucalyptus oil in different compositions during the pre- and post-weaning periods for calves were indicated.
