

## Top5 Silage

AVAILABLE WITH OR WITHOUT CLOVER

Top 5 Silage is a superior quality silage mixture. Designed for livestock farmers aiming for one or two high quality heavy silage cuts with the best possible aftermath grazing.

First cut will be late May with the option of a second cut approximately 6 weeks later, or alternatively commence grazing. The varieties in Top 5 Silage are specifically selected for their exceptional quality to help maximise the feed value of your silage crop without compromising on yield.

Fig 05.

### Top 5 Silage:

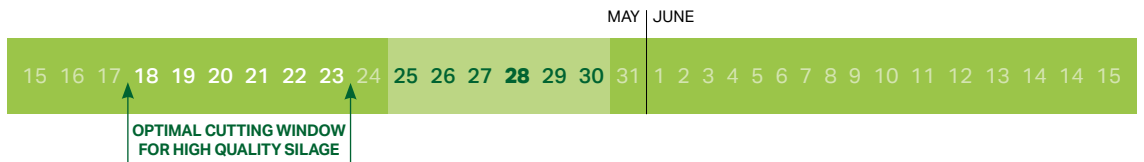

Kg	Variety	Type	Heading Date
2.5	AberClyde	Perennial Ryegrass (T)	25 May
3.0	AberMagic	Perennial Ryegrass	28 May
2.0	Dunluce	Perennial Ryegrass (T)	29 May
4.0	AberWolf	Perennial Ryegrass	30 May
11.5			

T = Tetraploid

Optimum spread of heading dates within mixtures for grazing and cutting results in better performance of the leys. When cutting for silage, aim to cut 5-10 days before average heading date for optimum quality.

### Key benefits in summary

- Contains top varieties on Teagasc PPI for silage sub-indices
- Balanced to optimise both first and second cut silage yields
- Varieties selected for their quality and WSC characteristics
- High seasonal growth for early spring or late autumn grazing
- Clover can be included on request

\*From 1st January 2020 farms in derogation are required to sow a minimum of 0.6 kg uncoated clover or 1.0 kg coated clover per acre when reseeded. This mixture does not contain clover, if necessary please request clover or speak to one of our sales team for advice.
